# 1. General information

## 1. General information

GB

- The temperature transmitter described in the operating instructions has been designed and manufactured using state-of-the-art technology. All components are subject to stringent quality and environmental criteria during production. Our management systems are certified to ISO 9001 and ISO 14001.
- These operating instructions contain important information on handling the instrument. Working safely requires that all safety instructions and work instructions are observed.
- Observe the local accident prevention regulations and general safety regulations, in effect for the instrument's range of use.
- The operating instructions are part of the instrument and must be kept in the immediate vicinity of the instrument and readily accessible to skilled personnel at any time.
- Skilled personnel must have carefully read and understood the operating instructions, prior to beginning any work.
- The manufacturers liability is void in the case of any damage caused by using the product contrary to its intended use, non-compliance with these operating instructions, assignment of insufficiently qualified skilled personnel or unauthorised modifications to the instrument.
- The general terms and conditions, contained in the sales documentation, shall apply.
- Subject to technical modifications.
- Further information:

# 1. General information

## Explanation of symbols

### **WARNING!**

... indicates a potentially dangerous situation, which can result in serious injury or death, if not avoided.

GB

### **CAUTION!**

... indicates a potentially dangerous situation, which can result in light injuries or damage to equipment or the environment, if not avoided.

### **Information**

... points out useful tips, recommendations and information for efficient and trouble-free operation.

### **DANGER!**

... identifies hazards caused by electrical power. Should the safety instructions not be observed, there is a risk of serious or fatal injury.

### **WARNING!**

... indicates a potentially dangerous situation hazardous area that can result in serious injury or death, if not avoided.

## 2. Safety

### 2. Safety

GB

#### **WARNING!**

Before installation, commissioning and operation, ensure that the appropriate temperature transmitter has been selected in terms of measuring range, design and specific measuring conditions.

Non-observance can result in serious injury and/or damage to the equipment.

#### **WARNING!**

This is Protection Class 3 equipment for connection at low voltages, which are separated from the power supply or voltage by greater than AC 50 V or DC 120 V. Preferably, a connection to an SELV or PELV circuit is recommended; alternatively protective measures from HD 60346-4-41 (DIN VDE 0100-410).

Alternatively for North America:

The connection can be made in line with "Class 2 Circuits" or "Class 2 Power Units" in accordance with CEC (Canadian Electrical Code) or NEC (National Electrical Code)

Further important safety instructions can be found in the individual chapters of these operating instructions.

#### **2.1 Intended use**

The model T32.xS temperature transmitter is a universal transmitter, configurable via HART® protocol, for use with resistance thermometers (RTD), thermocouples (TC), resistance and voltage sources as well as potentiometers.

The instrument has been designed and built solely for the intended use described here, and may only be used accordingly.

## 2. Safety

GB

The technical specifications contained in these operating instructions must be observed. Improper handling or operation of the instrument outside of its technical specifications requires the instrument to be taken out of service immediately and inspected by an authorised WIKA service engineer.

If the instrument is transported from a cold into a warm environment, the formation of condensation may result in the instrument malfunction. Before putting it back into operation, wait for the instrument temperature and the room temperature to equalise.

The manufacturer shall not be liable for claims of any type based on operation contrary to the intended use.

### 2.2 Personnel qualification

#### **WARNING!**

#### **Risk of injury should qualification be insufficient!**

Improper handling can result in considerable injury to personnel and damage to equipment.

- The activities described in these operating instructions may only be carried out by skilled personnel who have the qualifications described below.
- Keep unqualified personnel away from hazardous areas.

#### **Skilled personnel**

Skilled personnel are understood to be personnel who, based on their technical training, knowledge of measurement and control technology and on their experience and knowledge of country-specific regulations, current standards and directives, are capable of carrying out the work described and independently recognising potential hazards.

Special operating conditions require further appropriate knowledge, e.g. of aggressive media.

## 2. Safety

### 2.3 Additional safety instructions for instruments per ATEX

GB

#### **WARNING!**

Non-observance of these instructions and their contents may result in the loss of explosion protection.

#### **WARNING!**

- Observe the applicable regulations for the use of Ex-class instruments (e. g.: EN 60079-0: 2006, EN 60079-11: 2007, EN 60079-26: 2007, EN 60079-27: 2006 + 2008, EN 61241-0: 2006, EN 61241-11: 2006, EN 60079-15: 2005)
- Do not use transmitters with any damage to the exterior!

### 2.4 Special hazards

#### **WARNING!**

Observe the information given in the applicable type examination certificate and the relevant country-specific regulations for installation and use in hazardous areas (e.g. IEC 60079-14, NEC, CEC). Non-observance can result in serious injury and/or damage to equipment.

For additional important safety instructions for instruments with ATEX approval see chapter 2.3 "Additional safety instructions for instruments per ATEX".

#### **WARNING!**

The functional galvanic isolation present in the instrument does not ensure sufficient protection against electrical impulses in the sense of EN 61140.

## 2. Safety

### **WARNING!**

For hazardous media such as oxygen, acetylene, flammable or toxic gases or liquids, and refrigeration plants, compressors, etc., in addition to all standard regulations, the appropriate existing codes or regulations must also be followed.

### **WARNING!**

To ensure safe working on the instrument, the operator must ensure

- that suitable first-aid equipment is available and aid is provided whenever required.
- that the operating personnel are regularly instructed in all topics regarding work safety, first aid and environmental protection and know the operating instructions and, in particular, the safety instructions contained therein.

### **WARNING!**

When working during a running process operation, measures to prevent electrostatic discharge from the connecting terminals should be taken, as a discharge could lead to temporary corruption of the measured value.

The model T32.1S temperature transmitter should only be used with grounded thermometers! The connection of a resistance thermometer (e.g. Pt100) to the T32.1S must be made with shielded cable. The shield must be electrically connected with the housing of the grounded thermometer.

(drawings see chapter 6.1 "Grounding", page 17/18)

GB

## 2. Safety

The connection of a thermocouple sensor to the T32.3S must be made with a screened cable. The shield must be electrically connected with the housing of the grounded thermometer and, additionally, grounded to the side of the T32.3S. It should be ensured that there is equipotential bonding on installation, so that no balancing current can flow via the shield. Here, in particular, the installation regulations for hazardous areas should be followed!

### DANGER!

#### Danger of death caused by electric current

Upon contact with live parts, there is a direct danger of death.

- The instrument may only be installed and mounted by skilled personnel.
- Operation using a defective power supply unit (e.g. short circuit from the mains voltage to the output voltage) can result in life-threatening voltages at the instrument!

### WARNING!

Only instruments as described in chapter 4.2 "Operation in safety-related applications" are qualified for use in safety-related applications. Do not use other instruments in safety or Emergency Stop devices.

Incorrect use of the instrument can result in injury.

## 2. Safety

### 2.5 Versioning per NAMUR NE53

Version	Notes	Configuration WIKA_T32 software	T32 HART® instrument revision	Corresponding DD 1) (Device Description)
V2.1.3	first T32.xS version	v1.50	3	Dev v3, DD v1
v2.2.1	T32.xS version with option SIL	v1.51	3	Dev v3, DD v1

GB

1) not yet available; see chapter 6.3.2 "DD version"

### 2.6 Labelling, safety labels

#### Product label

- Head mounting version, model T32.1S

For an explanation of symbols,  
see page 12/13

For an explanation of symbols,  
see page 12/13

## 2. Safety

### ■ Rail mounting version, model T32.3S

### Explanation of symbols

Before mounting and commissioning the instrument, ensure you read the operating instructions!

### CSA, Canadian Standard Association

The instrument has been inspected and certified by CSA International. Instruments bearing this mark comply with the applicable Canadian standards on safety (including explosion protection).

## 2. Safety / 3. Specifications

### CE, Communauté Européenne

Instruments bearing this mark comply with the relevant European directives.

### ATEX European Explosion Protection Directive

(Atmosphère = AT, explosible = EX)

Instruments bearing this mark comply with the requirements of the European Directive 94/9/EC (ATEX) on explosion protection.

### FM, Factory Mutual

The instrument has been inspected and certified by FM Approvals. Instruments bearing this mark comply with the applicable US standards on safety (including explosion protection).

### GOST, Gossudarstwenny Standart

(Государственный Стандарт)

GOST-R (mark)

Instruments bearing this mark comply with the applicable Russian national safety regulations (Russian Federation).

### NEPSI, National supervision and inspection center for explosion protection and safety of instrumentation

The instrument has been inspected and certified by NEPSI. Instruments bearing this mark comply with the applicable Chinese standards on safety (including explosion protection).

### KOSHA, Korea Occupational Safety & Health Agency

The instrument has been inspected and certified by KOSHA. Instruments bearing this mark comply with the applicable Korean standards on safety.

GB

### 3. Specifications

#### 3. Specifications

GB

Specifications	Models T32.xS, T32.xR
Permissible ambient temperature range	{-50} -40 ... +85 °C
Climate class per IEC 654-1: 1993	Cx (-40 ... +85 °C, 5 ... 95 % relative air humidity)
Maximum permissible humidity	Test max. temperature variation 65 °C and -10 °C, relative humidity 93 % $\pm 3\%$ Test max. temperature 55 °C, relative humidity 95 %
■ Model T32.1S per IEC 60068-2-38: 1974	
■ Model T32.3S per IEC 60068-2-30: 2005	
Vibration per IEC 60068-2-6: 2007	Test Fc: 10 ... 2000 Hz; 10 g, Amplitude 0.75 mm
Shock per IEC 68-2-27: 1987	Test Ea: Acceleration Type I 30 g and Type II 100 g
Salt mist per IEC 60068-2-52	Severity level 1
Free fall drop per IEC 68-2-52: 1996	Drop height 1500 mm
Electromagnetic compatibility (EMC)	EMC directive 2004/108/EC, EN 61326 Emission (Group 1, Class B) and immunity (industrial application)

{ } Items in curved brackets are options for additional price, not for rail mounting version T32.3S

The models T32.1R and T32.3R temperature transmitters are available on request. The CE declaration of conformity (ATEX/EMC) is valid without restrictions for T32.1R and T32.3R (see Appendix 2 "EC Declaration of conformity").

For further specifications see WIKA data sheet TE 32.04 and the order documentation.

For further important safety instructions for operation in hazardous areas see chapter 10 "Notes for mounting and operating in hazardous areas".

## 4. Design and function

### 4. Design and function

#### 4.1 Description

The temperature transmitter is used for converting a resistance value or a voltage value into a proportional current signal (4 ... 20 mA). Thus the sensors are permanently monitored for their fault-free operation.

GB

The transmitter meets the requirements for:

- Functional safety per IEC 61508/IEC 61511-1 (depending on the version)
- Explosion protection (depending on the version)
- Electromagnetic compatibility in accordance with NAMUR recommendation NE21
- Signalling at the analogue output in accordance with NAMUR recommendation NE43
- Sensor burnout signalling in accordance with NAMUR recommendation NE89 (corrosion monitoring sensor connection)

#### 4.2 Operation in safety-related applications

The model T32.xS.xxx-S (SIL version) has been designed for use in safety-related applications.

The marking of this design variant is given in chapter 2.6 "Labelling, safety marking". For operation in safety-related applications the additional requirements must be observed (see safety manual "Information on functional safety of model T32.xS"). The instructions contained in this must be followed without fail.

#### 4.3 Scope of delivery

Cross-check scope of delivery with delivery note.

## **5. Transport, packaging and storage**

### **5. Transport, packaging and storage**

**GB**

#### **5.1 Transport**

Check instrument for any damage that may have been caused by transport. Obvious damage must be reported immediately.

#### **5.2 Packaging**

Do not remove packaging until just before mounting.

Keep the packaging as it will provide optimum protection during transport (e.g. change in installation site, sending for repair).

#### **5.3 Storage**

##### **Permissible conditions at the place of storage:**

- Storage temperature: -40 ... +85 °C
- Humidity: 95 % relative humidity

##### **Avoid exposure to the following factors:**

- Direct sunlight or proximity to hot objects
- Mechanical vibration
- Soot, vapour, dust and corrosive gases

# 6. Commissioning, operation

## 6. Commissioning, operation

In hazardous areas, only use temperature transmitters that are approved for those hazardous areas. The approval is marked on the product label.

GB

### 6.1 Grounding

## 6. Commissioning, operation

GB

For applications with higher EMC requirements, it is recommended using a shielded cable between the temperature transmitter and the sensor, especially in connection with long leads to the sensor. For an exemplary illustration, see drawing

### 6.2 Mounting

#### 6.2.1 Transmitter in head mounting version (model T32.1S)

The transmitters for head mounting (model T32.1S) are designed to be mounted on a measuring insert within a Form B, DIN connection head, with extended mounting space. The connection wires of the measuring insert must be approx. 50 mm long and insulated.

##### Mounting example:

3173801.A

11258421.09 01/2012 GB/D

## 6. Commissioning, operation

GB

### Mounting on the measuring insert

Mount the transmitter on the circular plate of the measuring insert using two countersunk M3 screws per EN ISO 2009. Appropriate threaded inserts have been press-fitted in the underside of the case. Assuming the countersinking is carried out correctly, the permissible screw length can be calculated as follows:

Check the screw length before fixing the transmitter to the measuring insert: insert the screw into the circular plate and verify length of 4 mm!

#### CAUTION!

Do not exceed the maximum permissible screw length!

The transmitter will be damaged if the screws are screwed further than 4 mm into the bottom of the transmitter.

### Mounting in connection head

Insert the measuring insert with the mounted transmitter into the protective sheath and secure into the connecting head using screws in pressure springs.

3173801.C

### Installation by means of DIN rail adapter

If the mechanical adapter, available as an accessory, is used the T32.1S head transmitters can also be fixed on a DIN rail.

## 6. Commissioning, operation

### 6.2.2 Transmitter in rail mounting version (model T32.3S)

Fasten the rail mounting case (model T32.3S) onto a 35 mm top-hat rail (EN 60175) by simply locking it into place without the need for any tools.

Disassembly is achieved by unlocking the locking element.

### 6.3 Configuration

The following parameters can all be configured: sensor model, sensor connection, user measuring range, output limit, alarm indication, terminal voltage monitoring, sensor break monitoring, measuring range monitoring, measuring rate, damping, write protection, offset values (1-point correction), Tag No. and user linearisation (custom characteristic curve). Furthermore, a linear transformation of the process value is possible using a 2-point correction.

User linearisation:

Via software, customer-specific sensor characteristics can be stored in the transmitter in order to define other sensor types. Number of auxiliary points: min. 2; max. 30. If more than 2 sensors are connected (dual sensor function) further configurations can be carried out. With the dual sensor function, two identical sensors (resistance sensor or thermocouple) with the same measuring range are connected and then processed together.

The transmitters are delivered with a basic configuration (see data sheet TE 32.04) or configured according to customer specifications. If the configuration is changed afterwards, the modifications must be noted on the label using a water-resistant felt-tip pen.

A simulation of the input value is not required to configure the T32.

A sensor simulation is only required for the functional test.

## 6. Commissioning, operation

GB

### **Freely programmable sensor functionality when 2 sensors have been connected (dual sensor)**

Sensor 1, sensor 2 redundant:

The 4 ... 20 mA output signal delivers the process value of sensor 1. If sensor 1 fails, the process value of sensor 2 is output (sensor 2 is redundant).

Average value:

The 4 ... 20 mA output signal delivers the average value from sensor 1 and sensor 2. If one sensor fails, the process value of the working sensor is output.

Minimum value:

The 4 ... 20 mA output signal delivers the lower of the two values from sensor 1 and sensor 2. If one sensor fails, the process value of the working sensor is output.

Maximum value:

The 4 ... 20 mA output signal delivers the higher of the two values from sensor 1 and sensor 2. If one sensor fails, the process value of the working sensor is output.

Difference:

The 4 ... 20 mA output signal delivers the difference between sensor 1 and sensor 2. If one sensor fails, the process value of the working sensor is output.

### **Freely programmable monitoring functions**

Monitoring of the measuring range:

If this function is activated, an error is signalled on the current loop (< 3.6 mA) if the measured value is either below or over the limits of the measuring range.

## 6. Commissioning, operation

### Freely programmable monitoring functions when 2 sensors have been connected (dual sensor)

GB

The following options are not available in the difference mode!

#### Redundancy/hot backup:

In the case of a sensor error (sensor break, line resistance too high or measured value outside the measuring range of the sensor) of one of the two sensors, the process value will be the value from the working sensor only. Once the error is rectified, the process value will again be based on the two sensors, or on sensor 1.

#### Ageing monitoring (sensor drift monitoring):

An error signal on the output is activated if the value of the temperature difference between sensor 1 and sensor 2 is higher than a set value, which can be selected by the user. This monitoring only generates a signal if two valid sensor values can be determined and the temperature difference is higher than the selected limit value.

(Cannot be selected for the 'Difference' sensor functionality, since the output signal already indicates the difference value).

## 6. Commissioning, operation

### 6.3.1 Configuration via the PC

To configure the transmitter, both configuration software and a HART® modem are needed. WIKA offers 3 different HART® modem models for this.

- ① HART® modem with USB interface, model 010031,  
order No. 11025166
- ② HART® modem with RS232 interface, model 010001,  
order No. 7957522
- ③ Bluetooth HART® modem, ATEX, CSA, FM approved, model 010041,  
order No. 11364254

The HART® modem may also be used in conjunction with other configuration software (see chapter 8 "WIKA T32 configuration software").

### WIKA T32 configuration software

We recommend using our WIKA T32 configuration software. This software is regularly updated and adapted to the firmware extensions of the T32, so that you always have full access to all functionalities and parameters of the transmitter (see chapter 8 "WIKA T32 configuration software").

### Further configuration software

With the following software tools it is also possible to carry out configurations at the T32 e.g.:

- AMS and SIMATIC PDM (T32\_EDD)
- FieldMate, PACTware, SmartVision and Fieldcare (DTM\_T32)
- DTM in FDT 1.2 frame application

With any other HART® configuration tool the generic mode functionalities can be operated (e.g. measuring range or Tag No.).

GB

## 6. Commissioning, operation

Further information on the configuration of the T32 with the software tools mentioned above is available on request.

GB

### 6.3.2 DD version

The model T32.xS temperature transmitter can be used with the following DTM and DD versions.

T32 HART® instrument revision	Corresponding DD (Device Description)	T32 HART® DTM
0	Dev v0, DD v2	DTM 1.0.2
1	Dev v1, DD v1	DTM 1.0.2
2	Dev v2, DD v1	DTM 1.0.2
3	Dev v3, DD v1	DTM 2.0.0.175

### 6.3.3 HART® communicator (HC275, FC375, FC475, MFC4150)

With the HART® communicator the instrument functions are selected via various menu levels and with the help of a special HART® function matrix (see chapter 6.5 "HART® configuration tree").

## 6.4 Connection of FSK modem, HART® communicator

### WARNING!

- The measuring circuit has to have a load of at least 250 Ω.
- For all transmitters with hazardous area protection observe chapter 10 "Notes for mounting and operating in hazardous areas".

This resistor is already integrated in most power supplies available in the market and is therefore not required separately. Frequently a special connection for the FSK modem is already available.

# 6. Commissioning, operation

## 6.5 HART® configuration tree (part 2 see next page)

GB

# 6. Commissioning, operation

## HART® configuration tree (part 2)

GB

## 6. Commissioning, ... 8. WIKA T32 ...

### Abbreviations used

PV:	Process value	(primary value)
SV:	Temperature of internal electronics	(secondary value)
TV:	Thermocouple compensation temperature	(tertiary value)
AO:	Analogue output	
URV:	Max. value	(upper range value)
LRV:	Min. value	(lower range value)
LSL:	Min. sensor limit	(lower sensor limit)
USL	Max. sensor limit	(upper sensor limit)

GB

## 7. Notes for operating in safety-related applications (SIL)

The model T32.xS.xxx-S (SIL version) has been designed for use in safety-related applications.

For operation in safety-related applications the additional requirements must be observed (see safety manual "Information on functional safety of model T32.xS"). The instructions contained in this must be followed without fail.

## 8. WIKA T32 configuration software

For installation please follow the instructions of the installation instructions. A free-of-charge download of the up-to-date version of the WIKA\_T32 software (suitable for Windows 98/2000/ME/XP/NT 4.0/7/VISTA) is available from [www.wika.com](http://www.wika.com).

### 8.1 Starting up the software

Start the WIKA\_TT software by double-clicking on the WIKA T32 icon.

## 8. WIKA T32 configuration software

To get complete access to all functions and parameters of the T32, you must choose the access level 'Specialist'. After installation, by default, no password is activated!

GB

### 8.2 Connection

Through the menu entry "connect" → "Single instrument", it will try to establish communication with a HART®-capable device with the HART® Poll Address 0 (zero). If this attempt is unsuccessful, the software will try to establish a Multidrop connection. The addresses 1-15 will be successively connected and will try to establish communication to a connected device.

Connection is only possible to a single instrument at any one time!

After successful connection the software shows the basic data for the connected instrument:

- TAG mark
- Description
- User message
- Serial number
- Instrument model and version
- Manufacturer and the PC port used

Confirm connection established with "OK".

### 8.3 Parameter configuration (configurable)

All data important for operating can be adjusted in the menu "Instrument data" → "Edit instrument data".

## 8. WIKA T32 configuration software

GB

During this, do not interrupt the communication with the transmitter, since the data may not be correctly read as a result of this.

Once the data has been correctly transferred, confirm with "OK".

Access to all operation-relevant functions and parameters such as:

- Sensor type and connection
- Measuring range and temperature unit
- Output signal
- Output limits and error signalling
- TAG of test point
- HART® poll address
- Burst mode

For further information on configuration, see contact data on page 4.

## 9. Electrical connections

### 9. Electrical connections

GB

#### WARNING!

Observe the safety-technical maximum values for the connection of the power supply and the sensors, see chapter 10.3 "Safety-technical maximum values".

When working on the transmitters (e.g. installation/removal, maintenance work) take measures to prevent electrostatic discharge from the terminals.

#### WARNING!

Only carry out installation in a de-energised state!  
The connected wires must be checked to ensure they are connected properly. Only well-secured wires can guarantee a fault-free operation.

For head mounting and rail mounting case, connection clamps for the HART® modem are available.

## 9. Electrical connections

Recommended tools for terminal screws:

Model	Screwdriver	Tightening torque	GB
T32.1S	Cross head (Pozidriv tip) size 2 (ISO 8764)	0.4 Nm	
T32.3S	Slotted, 3 mm x 0.5 mm (ISO 2380)	0.4 Nm	

### 9.1 Power supply, 4 ... 20 mA current loop

The T32 is a 2-wire temperature transmitter. Depending on the version, it can be supplied with various types of power supply.

Connect the positive line of the power supply to the terminal marked with  $\oplus$ , the negative line of the power supply to the terminal marked with  $\ominus$ .

With flexible leads we recommend the use of crimped connector sleeves. The integrated reverse polarity protection (wrong polarity on the terminals  $\oplus$  and  $\ominus$ ) prevents the transmitter from damage. The following maximum values are applicable:

- Model T32.xx.000: DC 42 V
- Model T32.xx.0IS: DC 30 V
- Model T32.xx.0NI: DC 40 V

The T32.xS temperature transmitter requires a minimum terminal voltage of DC 10.5 V. The load must not be too high, as otherwise, in the case of relatively high currents, the terminal voltage at the transmitter will be too low.

The T32 is equipped with terminal voltage monitoring ('under-voltage' detection).

If too small a voltage is detected at the terminal ( $< 10$  V) the error is signalled on the output ( $< 3.6$  mA).

## 9. Electrical connections

Maximum permissible load depending on the supply voltage:

### Load diagram

GB

For the power supply, use an energy-limited electrical circuit (EN/UL/IEC 61010-1, section 8.3) with the following maximum values for the power supply:

for  $U_B = 42$  V (DC): 5 A

For the external power supply a separate switch is required.

### 9.2 HART® loop display (DIH50)

Additional configuration of the temperature transmitter with a HART® Loop Display (model DIH50) is possible. This is used for the local display of the current process value. The unit and the configured measuring range of the transmitter are automatically updated via the HART® protocol in the display. No further change of the HART® loop display (DIH50) is necessary. To do this, the DIH50 must be in HART® mode.

# 9. Electrical connections

GB

## 9.3 Sensors

### 9.3.1 Schematic representation, configuration

### 9.3.2 Resistance thermometer (RTD) and resistance sensor

It is possible to connect an RTD resistance thermometer (e.g. per EN 60751) or any resistance sensor in a 2-, 3- or 4-wire connection method and to connect two identical resistance thermometers, having the same measuring ranges, in a two-wire circuit. Configure the input of the transmitter to match with the actual method of connection used. Otherwise you will not fully exploit the possibilities of connection lead compensation and, as a result, possibly cause additional measuring errors (see chapter 6.3 "Configuration").

### 9.3.3 Thermocouples (TC)

It is possible to connect one or two identical thermocouples. Make sure that the thermocouple is connected with the correct polarity. If the lead between the thermocouple and the transmitter needs to be extended, only use thermal or compensation cable appropriate for the connected thermocouple type.

Configure the input of the transmitter appropriately for the thermocouple type and the cold junction compensation actually used, otherwise measurement errors may be caused (see chapter 6.3 "Configuration").

## 9. Electrical connections

Should the cold junction compensation be operated with an external resistance thermometer (2-wire connection), connect this to terminals ② and ③.

GB

### 9.3.4 Connect mV sensor

Make sure that the mV sensor is connected with the correct polarity.

### 9.3.5 Potentiometer

Connection of a potentiometer is possible.

## 9.4 HART® signal

The HART® signal is measured directly via the 4 ... 20 mA signal line. The measuring circuit must have a load of at least  $250\ \Omega$ . However, the load must not be too high, as otherwise, in the case of relatively high currents, the terminal voltage at the transmitter will be too low. For that reason, connect the cable clamps of the modem and/or the HART® communicator, as described (see chapter 6.5 "HART® configuration tree" or use the existing communication connectors of a power supply/line transformer. The connection of the HART® modem and/or the HART® communicator is not dependant on polarity! The HART® modem or the HART® communicator may also be connected parallel to the resistor! When connecting an Ex version of the transmitter, observe the special conditions for safe use (see chapter 10 "Notes for mounting and operating in hazardous areas").

## 9. Electrical connections

### 9.4.1 Typical connection for hazardous areas (head mounting)

### 9.4.2 Typical connection for non-hazardous areas

## 10. Notes for mounting, operating in ...

### 10. Notes for mounting and operating in hazardous areas

**GB** In hazardous areas, only use temperature transmitters that are approved for those hazardous areas. The approval is marked on the product label.

When connecting them to other devices or component, observe the connection requirements regarding explosion protection, such as maximum admissible voltage, power or load with capacitances (see chapter 10.2 "Specific conditions for safe use").

The following information is based mainly on the EC type examination certificate, Certification No. BVS 08 ATEX E 019 X.

#### 10.1 Model overview and their European approvals

Model	Ex protection and approval no.	Ignition protection type
<b>T32.1S.0IS</b> (head mounting version)	II 1G Ex ia IIC T4/T5/T6 II 1D Ex iaD 20 T120 °C	intrinsically safe equipment
<b>T32.3S.0IS</b> (rail mounting version)	II (1G) 2G Ex ia IIC T4/T5/T6 II (1D) 2D Ex iaD 20/21 T120 °C	intrinsically safe equipment
<b>T32.xx.0NI</b>	II 3G Ex nL IIC T4/T5/T6	energy-limited equipment
	II 3G Ex nA IIC T4/T5/T6	non-sparking equipment
	II 3G Ex ic IIC T4/T5/T6	intrinsically safe equipment

The nominal electrical values for the head and the rail versions are identical.

For T32.xS.0IS: The intrinsically safe sensor circuit (optional 2-wire, 3-wire or 4-wire configuration) for both versions is intended for the supply of equipment in areas with 1G or 1D requirements.

## 10. Notes for mounting, operating in ...

GB

The version T32.1x.0IS is designed for installation in housings or connection heads in areas with 1G, 2G or 1D, 2D requirements.

The version T32.1x.0IS is intended for installation in a housing which guarantees at least protection class IP 20 (2G application or installation outside the hazardous area) or IP 6x (2D application).

### 10.2 Specific conditions for safe use

#### T32.3S.xxx:

The surface of the case is not conductive. The temperature transmitter must be mounted in a way that electrostatic charges will not occur.

#### T32.xx.0NI (use as energy-limited equipment II 3G Ex nL):

The supply current circuit must fulfil the requirements for ignition protection type II 3G Ex nL energy-limited per EN 60079-15. These temperature transmitters must be mounted in a case that must at least correspond to following ingress protection IP 54 according to EN 60529/IEC 60529.

#### T32.xx.0NI (use as non-incentive equipment II 3G Ex nA):

Disconnection of power supply is forbidden inside the hazardous area. When connecting or disconnecting the terminals ensure the power supply is disconnected outside the hazardous area.

These temperature transmitters must be mounted in a case that must at least correspond to following ingress protection IP 54 in accordance with EN 60529/IEC 60529.

The holes in the connection terminals (T32.1S.0NI, T32.1R.0NI) or the additional connections labelled "Modem" (T32.3S.0NI, T32.3R.0NI) shall not be used in connection with type of protection nA.

When during use in circuits with the safety class nA (non-incendive) the permissible connected loads have been exceeded for a short term<sup>1)</sup>, the use of these transmitters in circuits with the safety class Ex nL (energy limited) is not permissible any more.

1) When the transmitters are used in circuits with the safety class nA, it is permissible to exceed the maximum supply voltage by up to 40 % for a short term.

## 10. Notes for mounting, operating in ...

### T32.1x.0IS (head mounting version):

During installation in areas with 1G or 2G requirements, the following must be observed: Due to its design, the transmitter must be built into a housing suitable for installation in areas with 1G or 2G requirements and inside of which electrostatic discharges can be eliminated.

During installation in areas with 1D or 2D requirements, the following must be observed: Due to its design, the transmitter must be built into a housing suitable for installation in areas with 1D or 2D requirements and which guarantees protection class IP 6x in accordance with EN 60529.

### T32.3x.0IS (rail mounting version):

During installation in areas with 2G requirements, the following must be observed: Due to its design, the transmitter must be built into a housing which guarantees at least protection class IP 20 in accordance with EN 60529 and inside of which electrostatic discharges can be eliminated.

During installation in areas with 2D requirements, the following must be observed: Due to its design, the transmitter must be built into a housing suitable for installation in areas with 2D requirements which guarantees the protection class IP 6x in accordance with EN 60529.

### T32.xx.0IS (head and rail mounting version):

When installing them outside the potentially explosive atmosphere, the following must be observed: The transmitter must be built into a housing which guarantees at least protection class IP 20 in accordance with EN 60529.

The wiring in this housing must be carried out as described in section 6.3.11 and Section 7.6.e of EN 60079-11: 2007.

Connection components or connectors for intrinsically safe circuits must be designed in accordance with Section 6.2.1 or 6.2.2 of EN 60079-11:2007.

## 10. Notes for mounting, operating in ...

GB

- The external wiring shall be suitable for the ambient temperature range of the end use application. The maximum ambient temperature for T32 of 85 °C shall be considered. The minimum cross section for external wiring is 0.14 mm<sup>2</sup>.
- Ex ic applications:  
The temperature transmitters model T32.xx.0NI shall be installed in a pollution degree 2 environment or better in the end use application for use with an IP 20 minimum enclosure provided by end user.
- Ex nA or nL applications:  
The temperature transmitters model T32.xx.0NI shall be installed in a pollution degree 2 environment or better in the end use application for use with an IP 54 minimum enclosure provided by end user.

### Operation in zone 0:

The temperature transmitter may only be operated in areas requiring category 1 equipment when the following atmospheric conditions exist:

Temperature: -20 ... +60 °C

Pressure: 0.8 ... 1.1 bar

### Operation in zone 1 and zone 2:

In accordance with the temperature class, these transmitters may only be used in the following ambient temperature ranges:

Application	Ambient temperature range	Temperature class	Power Pi
Group II	-50 °C ≤ Ta ≤ +85 °C	T4	800 mW
	-50 °C ≤ Ta ≤ +75 °C	T5	800 mW
	-50 °C ≤ Ta ≤ +60 °C	T6	800 mW
Dust Ex	-50 °C ≤ Ta ≤ +40 °C	n. a.	750 mW
	-50 °C ≤ Ta ≤ +75 °C	n. a.	650 mW
	-50 °C ≤ Ta ≤ +100 °C	n. a.	550 mW

## 10.3 Safety values

### 10.3.1 Sensor circuit (terminals 1 to 4)

GB

Parameters		Model T32.xx.0IS	Model T32.xx.0NI
Voltage Uo		DC 6.5 V	DC 3.1 V
Strength of current Io		9.3 mA	0.26 mA
Power Po		15.2 mW / $\Omega$	1 mW
Voltage Ui		n. a.	n. a.
Strength of current li		n. a.	n. a.
Power Pi		n. a.	n. a.
Effective internal capacitance Ci		208 nF	208 nF
Effective internal inductance Li		negligible	negligible
Max. external capacitance Co	IIC	24 $\mu$ F <sup>1)</sup>	1,000 $\mu$ F
	IIB iaD	570 $\mu$ F <sup>1)</sup>	
	IIA	1,000 $\mu$ F <sup>1)</sup>	
Max. external inductance Lo	IIC	365 mH	1,000 mH
	IIB iaD	1,644 mH	
	IIA	3,288 mH	
Max. inductance/resistance ratio Lo/Ro	IIC	1.44 mH/ $\Omega$	9 mH/ $\Omega$
	IIB iaD	5.75 $\mu$ H/ $\Omega$	
	IIA	11.5 $\mu$ H/ $\Omega$	
Characteristic curve		linear	

n. a. = not applicable

1) Ci already incorporated

Notes:

Uo: max. voltage of any conductor against the other three conductors

Io: max. current of three conductors parallel to the fourth conductor or any other combination

Po: max. power of three conductors parallel to the fourth conductor or any other combination

## 10. Notes for mounting, ... / 11. Maintenance

### 10.3.2 Intrinsically safe supply and signal circuit

(4 ... 20 mA loop; terminal  $\oplus$  und  $\ominus$ )

Parameters	Model T32.xx.0IS		Model T32.xx.0NI
	Gas hazardous application	Dust hazardous application	Gas hazardous application
Terminals	+ / -	+ / -	+ / -
Voltage $U_i$	DC 30 V	DC 30 V	40 V
Strength of current $I_i$	130 mA	130 mA	23 mA *)
Power $P_i$	800 mW	750/650/550 mW	1 W
Effective internal capacitance $C_i$	7.8 nF	7.8 nF	7.8 nF
Effective internal inductance $L_i$	100 $\mu$ H	100 $\mu$ H	100 $\mu$ H

\*) The maximum operating current is limited by the T32. The maximum output current of the associated energy-limited apparatus does not have to be  $\leq 23$  mA.

The supply and signal circuit and the intrinsically safe sensor circuit must be considered as galvanically connected to each other.

### 10.3.3 Connection of the HART® modem/HART® communicator (terminal $\oplus$ and $\ominus$ )

- The sum of all voltages connected (supply plus output values of the HART® modem and/or HART® Communicator) must not exceed 30 V for T32.xx.0IS and 40 V for T32.xx.0NI.
- The sum of the effective capacitances and inductances must not exceed the maximum permissible value according to the required equipment group (IIA up to IIC).

## 11. Maintenance

The temperature transmitter described in these operating instructions is maintenance-free! The electronics are completely encapsulated and incorporate no components which could be repaired or replaced.

Repairs must only be carried out by the manufacturer.

# 12. Faults

## 12. Faults

### Fault-tree

GB

## 12. Faults / 13. Return and disposal

### CAUTION!

If deficiencies cannot be eliminated by means of the measures listed above, shut down the instrument immediately, and ensure that pressure and/or signal are no longer present, and secure the instrument from being put back into operation inadvertently.

In this case, contact the manufacturer.

GB

If a return is needed, please follow the instructions given in chapter 13.1 "Return" and enclose a short description of the problem, details of ambient conditions as well as period of operation before the problem occurred with the temperature transmitter.

## 13. Return and disposal

### WARNING!

Residual media in the dismounted instrument can result in a risk to personnel, the environment and equipment.

Take sufficient precautionary measures.

### 13.1 Return

### WARNING!

**Strictly observe the following when shipping the instrument:**

All instruments delivered to WIKA must be free from any kind of hazardous substances (acids, leachate, solutions, etc.).

When returning the instrument, use the original packaging or a suitable transport package.

## 13. Return and disposal

GB

### To avoid damage:

1. Wrap the instrument in an antistatic plastic film.
2. Place the instrument, along with the shock-absorbing material, in the packaging.  
Place shock-absorbing material evenly on all sides of the shipping packaging.
3. If possible, place a bag, containing a desiccant, inside the packaging.
4. Label the shipment as transport of a highly sensitive measuring instrument.

Enclose the completed return form with the instrument.

The return form is available in the 'Service' section on [www.wika.com](http://www.wika.com).

### 13.2 Disposal

Incorrect disposal may endanger the environment.

Dispose of instrument components and packaging materials in an environmentally compatible way and in accordance with the country-specific waste disposal regulations.
