# Safety notes / Technical support

#### **Notes**

- Installation, maintenance and commissioning may be accomplished only by qualified technical personnel.
- The product must be used only in the manner outlined in this instruction manual.

# Special attention must be paid to warnings and notes as follows:

	WARNING
<u> </u>	Relates to a caution symbol on the product: A failure to observe the necessary precautions can result in death, serious injury and/or considerable material damage.
	WARNING
	Relates to a caution symbol on the product: Risk of electric shock
	WARNING
•	A failure to observe the necessary precautions can result in death, serious injury and/ or considerable material damage.
	This symbol is used, when there is no corresponding caution symbol on the product.
CAUTION	A failure to observe the necessary precautions can result in considerable material damage.
Safety symbols	
In manual and on product	Description
$\triangle$	CAUTION: refer to accompanying documents (manual) for details.

#### Series RN 3000/6000

#### Introduction

# **Applications**

The ROTONIVO is an electromechanical Level limit switch and is used for level monitoring of bulk goods.

The units can be delivered with a wide range of Ex-approvals for use in Hazardous Areas.

They can be equipped for process over- and lowpressure and also for very high or low process temperatures.

Selected applications:

building materials industry

lime, styrofoam, moulding sand, etc.

food industry

milk powder, flour, salt, etc.

plastics industry

plastics granules etc.

- timber industry
- chemical industry
- mechanical engineering

The ROTONIVO is normally screwed into the lateral container wall so that it is in level with the filling height to be registered and monitored.

The device can also be mounted from the top of the container. In this case an extension piece is used to mount the probe level with the height to be registered.

The length of the probe can be up to 4 m (158") with an extension tube or up to 10 m (394") with an extension rope.

The use of a sliding sleeve for the version RN 3002/ RN 6002 is recommended so that the switch point can be changed easily during operation of the device.

#### Series RN 3000/6000

#### **Function**

A measuring vane is driven by a synchronous motor. The bearing of the motor inside the housing allows it to swing. The motor is fixed to a switching lug.

If the vane is uncovered, a spring pulls the motor and switching lug to the left position (figure 1).

When material covers the vane and thus stops the rotation, the motor and switching lug swings to the right position (figure 2). The signal output indicates "covered" and the motor is stopped.

When the vane becomes uncovered due to falling material, the spring pulls the motor and switching lug back to the left position (figure 1). The motor is started and the signal output indicates "uncovered".

With the option fail safe alarm it is possible to recognize a fault of the unit in time and to initiate an alarm relay. The following faults are observed:

- Motor
- Gear
- Electronic for motor power supply
- Supply voltage failure
- Defect of the connecting wires

#### Functional safety SIL2 (IEC 61508)

With option Functional safety the unit observes the motor, gear and electronic. The result of this diagnostics is present on the signal output, which states the full/empty condition.

#### Switchable signal output (Fail safe high/low)

With version "Universal voltage", "PNP" and optional "AC" a switchable signal output FSH/ FSL is integrated.

#### Signal output delay:

The version "Universal voltage" and "PNP" has an integrated adjustable delay for the signal output.

# **Options**

# Weather protection cover

If the measuring device is used outdoors, the use of the weather protection cover is recommended. It protects the device from all atmospheric influences such as:

- rain water
- condensation water
- excessively high temperatures due to insolation
- excessively low temperatures in winter

Material: PE, weather and temperature stable

Not available for housing version d and de. For use in Hazardous Locations: only permitted for zone 2 and 22 or Division 2.

#### Sliding sleeve

RN 3002/6002 Process connection and material as chosen

Version with selection code pos.30: Only for applications without process pressure. Not available for Ex-approvals.

Version with selection code pos.31: For applications with process pressure. Sealing material to the extension tube: viton.

#### Mounting set

Screws and washers for fixing the unit on a flange.

#### Flat gasket

On the face sealing of the process connection thread. Incl. sealing face for version with G 1½" thread.

Max. 250°C

#### LED

(Glass window in lid)

To see the indicating light on the electronic module from outside.

Not available for housing version d and de.

#### Bulb

Bright indicating light seen from outside.

Not available for use in Hazardous Locations.

#### Plug

Used instead of cable gland.

Not available for use in Hazardous Locations and FM/ CSA general purpose.

Connection of the plug wires to the internal terminals of the unit must be done on site or according to customer demands.

Valve connector (incl. mating plug)

4-pole (incl. PE), max. 230 V, enclosure plastic, IP65

Plug M12 (without mating plug)

4-pole, max. 25 V or 5-pole , max. 60 V

Enclosure brass, IP67

Plug Han 4A (incl. mating plug)

5-pole (incl. PE), max. 230 V, enclosure zinc, IP65

# Level limit switch Series RN 3000/6000

#### Technical information / Instruction manual

# **Options / Mounting**

**EHEDG** approval

EHEDG conform design (material and construction in contact with the process).

Approved with flush welding socket Material: aluminium or 1.4301 (304) or 1.4404 (316L) (details see: mounting instructions EHEDG version, page

Food grade material

Food grade material in contact with the process food (sealing and grease FDA conform). The option does not automatically implement a food conform design (food conform gaps, surface and radiuses).

# Mounting

# General Safety Instructions

Process pressure	Improper installation may result in loss of process pressure.				
Chemical resistance against the medium	Materials of construction are choosen based on their chemical compatibility (or inertness) for general purposes. For exposure to specific environments, check with chemical compatibility charts before installing.				
Mechanical load	The torque at the fastening spot must not exceed the specified ratings. See page 12 for details.				
Mounting location	Keep away from incoming material and from silo walls.  The installation has to be carried out, that the sensor elements cannot hit the wall of the silo. The flow of the medium and fixtures in the container must be considered. This is especially important for extension length of more than 3000 mm (118")				
Sliding sleeve	Tighten both straining screws M8 with 20 Nm to obtain resistance against pressure				
Flange mounting	A plastic seal must be used to tighten the flange.				
EHEDG-approval/	The materials are available for the use under normal and predictable applications (according to				

Food grade material

# Additional Safety Instructions for Hazardous Locations

Installation regulations	For devices to be used in Hazardous Locations the respective valid installation regulations must be observed.
Sparks	The installation has to be done in a way, that mechanical friction or impact does not cause sparks between the aluminium enclosure and steel.

directive 1935/2004 Art.3). Other conditions can influence the safety.

#### Series RN 3000/6000

# Mounting

# Mounting instructions

#### Rotatable housing

The housing can be rotated against the threaded connection after mounting.

RN 6000: For the d- and de- housing:
Fixing screw must be unfastened
to enable rotation. Fix the screw
again, when the housing has the
right position.

Direction of the cable glands

When the unit is mounted from the side, ensure, that the cable glands face downwards and are closed

to avoid water penetration into the housing.

Sealing

Seal the process connection thread with teflon tape against process pressure. Alternative use of a flat gasket is possible (option pos. 15)

Precaution for later dismounting/ Service

- Use teflon tape to avoid seizing of aluminium process connection thread with the socket
- Grease the screws of the lid if corrosive atmosphere is present (e.g. close to sea)

#### **EHEDG-Approval**

Seal the thread with teflon tape against process pressure.

Metal-metal sealing:

- The support muß be plane and without any gap. No teflon tape (or similar) is allowed to be in between.
- Fixing torque 100 Nm

The quality of the welding with the container wall must be according to the respective regulations (e.g. gaps, transitions, surface finish).

Dimension of flush welding socket (for optional on site manufacturing):

# **Electrical installation**

# General Safety Instructions

Handling	In the case of improper handling or handling malpractice, the electric safety of the device cannot be guaranteed.
Installation regulations	The local regulations or VDE 0100 (Regulations of German Electrotechnical Engineers) must be observed.  With use of 24 V supply voltage, an approved power supply with reinforced insulation to mains is required.
Fuse	Use a fuse as stated in the connection diagrams (see pages 23 and 24).
RCCB protection	In the case of a fault, the supply voltage must be automatically switched off by a RCCB protection switch to protect against indirect contact with dangerous voltages.
Power supply switch	A voltage disconnection switch must be provided near the device.
Wiring diagram	The electrical connections are made in accordance with the wiring diagram.
Supply voltage	Compare the supply voltage applied with the specifications given on the electronic module and name plate before switching the device on.
Cable gland	The screwed cable gland and closing element must have following specifications: Ingress protection IP66, temperature range from -40°C to +70°C, UL or VDE or INMETRO certified (depending on the country where the unit is installed), pull relief. Make sure that the screwed cable gland safely seals the cable and that it is tight (danger of water intrusion). Cable glands that are not used have to be sealed with a blanking element.  The diameter of the field wiring cable has to match to the clamping range of the used cable gland.
Conduit system	In case of using a conduit system (with NPT thread) instead of a cable gland the regulations of the country, where the unit is installed, must be observed. The conduit must have a tapered thread either NPT ½" or NPT ¾" in accordance with the unit and ANSI B 1.20.1. Not used inlets must be closed tight with a metal blanking element.
Field wiring cables	<ul> <li>The diameter has to match to the clamping range of the used cable gland.</li> <li>The cross section has to match with the clamping range of the connection terminals and consider the max. current.</li> <li>All field wirings must have insulation suitable for at least 250 V AC.</li> <li>The temperature rating must be at least 90°C (194°F).</li> <li>If higher immunity interferences as specified in the stated EMC standards are present (see chapter approval), a shielded cable is required, otherwise an unshielded instrumentation cable is satisfactory.</li> </ul>
Guiding the cables in the terminal box	Cut the field wiring cables to appropriate length to fit properly into the terminal box.
Microswitch protection	Provide protection for microswitch contacts to protect the device against inductive load surges.
Protection against static charging	The housing of the unit must be grounded to avoid static charging of the unit. This is particularly important for applications with pneumatic conveying and non-metallic containers.

#### Series RN 3000/6000

#### **Electrical installation**

**Field wiring** A strain relief must be provided for the field wiring cables, when the device is installed with the factory

provided cable glands.

**Field wiring terminals for** Fixing torque : "de" housing Remove wire isolat

Fixing torque: 0.5 - 0.6 Nm Remove wire isolation: 9 mm

Cable glands and conduit system for ATEX/ IEC-Ex INMETRO/ TR-CU (Dust and Gas Hazardous

Locations)

Installation according to the regulations of the country, where the product is installed.

Not used entries have to be closed with blanking elements certified for this purpose.

Where available the factory provided parts must be used.

A strain relief must be provided for the field wiring cables, when the device is installed with the factory provided cable glands.

The diameter of the field wiring cable must match to the clamping range of the cable clamp.

If other than the factory provided parts are used, following must be ensured:

The parts must have an approval adequate to the approval of the level sensor (certificate and type of protection).

The approved temperature range must be from the min. ambient temperature of the level sensor to the max. ambient temperature of the level sensor increased by 10 Kelvin.

The parts must be mounted according to the instructions of the supplier.

Installation of a flameproof/ explosion proof enclosure with a conduit system:

In a conduit system single electric conductors are installed in a certified pipe system. This pipe system is in a flameproof/ explosion proof construction as well. The flameproof/ explosion proof enclosure and the pipe system needs to be sealed from each other by a certified flameproof seal of a type "d" or explosion proof of a type "XP". This seals shall be installed directly in or at the conduit entries of the flameproof/ explosion proof enclosure. Not used entries have to be closed with blanking elements certified for this purpose (flameproof type "d" or explosion proof type "XP").

# Conduit system for FM and CSA

(Dust and Gas Hazardous Locations)

General requirements:

In addition the regulations of the country must be observed. The used flameproof seals and blanking elements must have an adequate type approval and a temperature range of at least  $-40^{\circ}$ C ( $-40^{\circ}$ F) to  $+80^{\circ}$ C ( $176^{\circ}$ F). In addition they shall be suitable for the conditions and correctly installed. Where available the provided original parts of the manufacturer must be used.

Installation of a flameproof enclosure "d" with a conduit system:

In a conduit system single electric conductors are installed in a certified pipe system. This pipe system is in a flameproof construction as well. The flameproof enclosure "d" and the pipe system needs to be sealed from each other by a certified flameproof seal. Conduit entries of a flameproof enclosure "d" shall have installed the flameproof seal within 18 inches from the enclosure wall. Not used entries have to be closed with adequate blanking elements of a certified flameproof type AEx Cl.1 Div.1 A.

#### Commissioning

Commissioning only with closed lid.

#### Opening the lid

#### Units with Dust Explosion approval:

Before opening the lid take care, that no dust deposits or whirlings are present.

Do not remove the lid (cover) while circuits are alive.

#### RN 6000:

#### Units with flameproof GasExplosion approval (d-housing):

To prevent ignition of hazardous atmospheres, do not remove the lid (cover) while circuits are alive.

# **Electrical installation**

#### Connection

# RN 3000: Standard housing

# RN 6000: Standard and d-housing

Connection is done directly on the PCB

# de-housing

Connection is done on the terminals inside the increased safety area.

#### Series RN 3000/6000

# Signal and alarm output

Overview

Overview of signal and alarm output for the different electronic versions: see page 5

Signal output: Switching logic

Version • RN 3000: AC, DC • RN 6000: AC, DC

Version • RN 3000: Universal voltage, PNP

• RN 6000: Universal voltage (without SIL 2)

FSH: Use this setting when sensor is used as a full detector.

Power failure or line break is regarded as "full" signal (protection against overfilling).

FSL: Use this setting when sensor is used as an empty detector.

Power failure or line break is regarded as "empty" signal (protection against running dry).

7 6 5

8 9 10

failure

# Signal and alarm output

#### Version • RN 6000: Universal voltage SIL 2

FSH: Use this setting when sensor is used as a full detector.

Power failure or line break is regarded as "full" signal (protection against overfilling).

FSL: Use this setting when sensor is used as an empty detector.

Power failure or line break is regarded as "empty" signal (protection against running dry).

Factory setting: FSL

#### Series RN 3000/6000

# Signal and alarm output

# Signal output: Delay

# Alarm output

(Fail safe alarm, Rotation control)

#### Switching and timing behaviour:

If the sensor is not covered, the rotating paddle shaft will send pulses at 20 sec intervals. In case of fault, the pulses are missed. After 30 sec the alarm relay will open.

#### RN 3000 Universal voltage

### RN 6000 Universal voltage (without SIL 2)

#### Connection example:

Full detector with maximum safety: The output signal opens in case of:

- full signal or
- failure of supply voltage or
- · defect of the connection wires or
- defective unit

Signal output

# Level limit switch Series RN 3000/6000

#### Technical information / Instruction manual

# **Settings: Sensitivity**

Adjustment of the spring

The spring is adjustable in 3 positions. It should be changed only if necessary.

"Fine": for light material

"Medium": suitable for nearly every material (factory setting)

"Coarse": for very sticky material

The spring can be changed via a small plier.

#### Sensitivity

The table shows approximate values for the minimum densities, at which a normal function should be possible.

	*Minimum density in g/l = kg/m³ (lb/ft³) (without guarantee)				
Vane	Vane completely covered with bulk material		Bulk material up to 100 r		
varie	Spring	adjustment	Spring ad	justment	
	fine	medium (factory setting)	fine	medium (factory setting)	
Boot shaped vane 40 x 98	200 (12)	300 (18)	100 (60)	150 (9)	
Boot shaped vane 35 x 106	200 (12)	300 (18)	100 (60)	150 (9)	
Boot shaped vane 28 x 98	300 (18)	500 (30)	150 (9)	200 (12)	
Boot shaped 26 x 77	350 (21)	560 (33)	200 (12)	250 (15)	
Vane 50 x 98	300 (18)	500 (30)	150 (9)	250 (15)	
Vane 50 x 150	80 (4.8)	120 (7.2)	40 (2.4)	60 (3.6)	
Vane 50 x 250	30 (1.8)	50 (3)	15 (0.9)	25 (1.5)	
Vane 98 x 98	100 (60)	150 (9)	50 (3)	75 (4.5)	
Vane 98 x 150	30 (1.8)	50 (3)	15 (0.9)	25 (15)	
Vane 98 x 250	20 (1.2)	30 (1.8)	15 (0.9)	15 (0.9)	
Hinged vane 98 x 200 b=37 double sided	70 (4.2)	100 (60)	35 (2.16)	50 (3)	
Hinged vane 98 x 200 b=28 double sided	100 (60)	150 (9)	50 (3)	75 (4.5)	
Hinged vane 98 x 100 b=37 single sided	200 (12)	300 (18)	100 (60)	150 (9)	
Hinged vane 98 x 100 b=28 single sided	300 (18)	500 (30)	150 (9)	250 (15)	

The above mentioned data is a guideline and is for loose, non compacted material.

During the filling the bulk density can change (e. g. for fluidised material).

<sup>\*</sup>For versions with option 26 (heating of housing) the above mentioned data must be multiplied by 1.5.

page 28 gi011016 RN 3000 / 6000

#### Series RN 3000/6000

#### **Maintenance**

#### Opening the lid (cover)

Before opening the lid for maintenance reasons observe following items:

- Do not remove the lid while circuits are live.
- No dust deposits or whirlings are present.
- No rain can enter into the housing.

# Frequent check of the unit

To ensure durable safety in hazardous locations and with electrical safety, following items must be checked frequently depending on the application:

- Mechanical damage or corrsion of any components (housing side and sensor side) and of the field wiring cables.
- Thight sealing of the process connection, cable glands and enclosure lid...
- Properly connected external PE cable (if present).

#### Cleaning

If cleaning is required by the application, following must be observed:

Cleaning agent must comply with the materials of the unit (chemical resistance). Mainly the shaft
 sealing, lid sealing, cable gland and the surface of the unit must be considered.

The cleaning process must be done in a way, that:

- The cleaning agent cannot enter into the unit through the shaft sealing, lid sealing or cable gland.
- No mechanical damage of the shaft sealing, lid sealing, cable gland or other parts can happen.

Units with EHEDG certification, which are used in the respective EHEDG applications, must be cleaned dry only (Type ED). Furthermore the respective regulations must be observed.

A possible accumulation of dust on the unit does not increase the maximum surface temperature and must therefore not be removed for purposes of maintaining the surface temperature in hazardous locations.

#### **Function test**

A frequent function test may be required depending on the application.

Observe all relevant safety precautions related with a safe work depending on the application (e.g.

hazardous locations, hazardous bulk material, electrical safety, process pressure).

This test does not proof if the sensor is sensitive enough to measure the material of the application.

Function test is done by stopping the rotating paddle with appropriate means and monitor if a correct change of the signal output from uncovered to covered happens.

#### **Production date**

The production date can be traced by the serial number on the typeplate. Please contact the manufacturer or your local distrubutor.

# Spare parts

All available spare parts are stated in the selection list.

# Repair of flamepath

Repair of flamepath on units with Ex d, Ex de or XP approvals is not intended. Please contact manufacturer.

# Level limit switch Series RN 3000/6000

	1, 2	2 G	Gb	the installation are necessary.
	2	3 G	Gc	

#### General Notes

Marking

Devices with Ex approval are marked on name plate.

Process pressure

The device construction allows process over-pressure up to 0.8/5/10 bar (11.6/73/145 psi) (see name plate). These pressures are allowed for test purposes. The definition of the Ex approvals are only valid for a container-over-pressure between -0.2..+0.1 bar (-2.9..+1.45 psi).

For higher or lower pressures the approvals are not valid.

Process and ambient temperature

The permitted temperature ranges are marked on the name plate.

# Permitted zones for mounting in partition wall

page 30 gi011016 RN 3000 / 6000

# Series RN 3000/6000

# **Notes for use in Hazardous Locations**

# Max. Surface Temperature and Temperature Code

The temperature marking on the name plate refers to the instruction manual. In the following tables the relevant temperature ratings are shown.

The maximum surface temperature (resp. temperature class) is the warmest temperature of the unit which could occur during malfunction (according to Ex-definition).

Enclosure directly mounted to the process connection						
Max. ambient temperature*	Max. process temperature			Temperature class (Zone system)		
30°C (86°F)	50°C (122°F)	90°C (194°F) 120°C (248°F) <sup>(1)</sup>	T5 T4A <sup>(1)</sup>	T5 T4 <sup>(1)</sup>
