

Neles Easyflow™ compact rack and pinion pneumatic actuators

Series RNP

The Neles Easyflow™ RNP series double-opposed piston rack and pinion actuators combine the benefits of high cycle life, a rugged construction, and an extremely compact and symmetrical design with a unique range of features and options. They are specifically designed for fast efficient operation of ball, butterfly, and other rotary type valves.

Versatility

- Modular designs with same body and end caps for double-acting and spring-return. Springs can be added in the field to convert double-acting to spring-return or for changes in supply pressure.
- Failure direction can be easily reversed from spring-to-open or spring-to-close orientation simply by inverting the pistons.
- Actuator to valve attachments comply with ISO 5211.
- Solenoid valve and accessory attachments comply with NAMUR VDI/VDE 3845.
- A wide range of optional accessories and control devices that include limit switches and solenoid valves are available to satisfy virtually all automated valve requirements.

High cycle life

- Bearings on all sliding and rotating moving parts to ensure long life.
- Dual piston rack-and-pinion mechanism for simple construction, high cycle life, and constant torque.
- Hard-anodized extruded aluminum body with honed internal surface for strength and lower coefficient of friction.
- Mechanically multi-guided aluminum pistons for precise movement, low friction, and high cycle life.
- Machined teeth on piston racks and pinions for excellent rack and pinion engagement and maximum efficiency.

Corrosion resistant

- Hard anodized body providing high corrosion resistance. Optional epoxy painting by the spray technique. This epoxy coating helps in protecting the actuator from extremely corrosive environments.

Reliability

- Safety-contained multi-spring design with preloaded and heavy-duty coated springs for simpler range versatility, greater safety, and corrosion resistance.

- External adjustable stops in both directions assure flexibility and accuracy when setting the valve in the open and closed positions.
- As an added safety feature, the external adjustment screws are designed to start venting internal pneumatic pressure in the actuator before the screw is fully backed out. The sound of escaping pressure indicates an unsafe condition.

Specifications

- Pneumatic piston type quarter turn actuator
- Spring return and double acting models
- Supply medium: Air, nitrogen
- Design pressure: 12 barg
- Maximum operating pressure: 8 barg
- Torque output range
- Spring return model:
 - Spring nominal: 4 Nm to 2694 Nm
 - Air break @ 4 Barg: 4 Nm to 2132 Nm
- Double acting model:
 - Air break @ 4.0 barg: 14 Nm - 3080 Nm
- Temperature range:
 - -20 °C ... +80 °C (normal)
 - -20 °C ... +125 °C (high temp)
 - -55 °C ... +80 °C (arctic)

Standards

- Actuator to valve mounting: ISO 5211
- Actuator to solenoid mounting: Namur, VDI/VDE3845
- Actuator to accessory mounting: Namur, VDI/VDE3845
- External corrosion protection in compliance with ISO 12944-2 and EN 15714-3 class C3

Approvals and certificates

- Approved to ATEX 94/9/EC
- SIL3 capable
- CE, EAC, TR CU 012/11
- IP67M, IP68M

Actuator selection

To select an actuator for a particular valve and service, first determine the maximum operating torque that will be required from the applicable valve bulletin. Then refer to the appropriate torque output table and select an actuator that will, at the available supply pressure, provide a torque output no less than the required operating torque for the valve.

For spring-return units, both the spring torque and the air torque must exceed the required operating torque for the valve. If you have any question that the actuator selected meets your intended service requirement, contact Valmet. Contact information is located on last page of this technical bulletin.
